WHAT 'S SEA-AIR FREIGHT?

Sea-Air freight, also known as multimodal or intermodal transportation, is a logistics solution that combines both sea and air transportation to move goods from one location to another. It offers a compromise between the slower, cost-effective option of ocean freight and the faster, albeit more expensive, option of air freight.

ADVANTAGES OF SEA-AIR FREIGHT

- Faster than Ocean Freight: Sea-Air freight is faster than pure ocean freight, enabling quicker delivery of goods.
- Cost Savings: While it may be more expensive than traditional ocean freight, Sea-Air freight is often more cost-effective than pure air freight. It offers a balance between speed and cost.
- Mitigates delays at origins with airport congestions by moving large volumes in containers.
- Ease of CFS operations and procedures phasing in of cargo to meet schedules departure dates.
- One rate –Fob Port of Loading to Airport of Destination –all inclusive
